*Figures according to ADR 81/02 derived from laboratory testing. Factors including but not limited to driving style, road and traffic conditions, environmental influences, vehicle condition and accessories fitted, will in practice in the real-world lead to figures which generally differ from those advertised. Advertised figures are meant for comparison amongst vehicles only. #MG iSMART is provided as a complimentary service for the first 12 months from your purchase date of a new MG vehicle. After this period, you are responsible for payment of any service or licence charges MG may introduce. If charges are implemented, you will receive at least 60 days' notice. †Optional feature, offered only on the Explore Pro variant. ^Maximum vehicle braked towing capacity is subject to state and federal regulatory requirements. Before towing, customers should consider the vehicle's limitations, including towing capacity specifications, gross vehicle mass (GVM), gross combined mass (GCM), kerb weight specified by the manufacturer, and ensure that individual front and rear axle load limits are not exceeded as also specified by the manufacturer. Vehicle payload calculation is GVM less kerb weight or as otherwise specified in the vehicle owner's manual. Actual payload is affected by any added load to the vehicle, including the number of occupants, luggage, accessories, and tow ball download weight. It is important to consider the actual payload, to ensure the fully loaded vehicle remains within the specified GVM limits. ◊Towing Cruise Control (TCC) functions as a conventional cruise control system, maintaining a pre-set vehicle speed only. The driver must remain in full control of the vehicle at all times whilst TCC is active, including steering and braking. When TCC is activated, the driver may remove their foot from the accelerator pedal but must keep their foot within immediate reach of the brake pedal. TCC is not a substitute for driver attention, judgement, or responsibility.
